## ■ Proper usage

### ○ Environment

Please avoid the following places:

- A place where this product may be damaged by strong impact or vibration.
- A place where corrosive gas or flammable gas and water, oil, dust exist.
- A place where magnetic and electrical noise occur.
- A place where high temperature and humidity are beyond rated specification.
- A place where there are strong alkalis and acids.
- A place where there are direct rays of sun.

### ○ Noise

- We test 2kV, Pulse width 1 $\mu$ s against Impulse voltage between power terminals and 1kV, Pulse width 1 $\mu$ s at noise simulator against external noise voltage. Please install MP condenser(0.1 to 1 $\mu$ F) or oil condenser between power terminals when over impulse noise voltage occurs.
- When testing dielectric voltage and insulation resistance of the control panel with this unit installed.
- Please isolate this unit from the circuit of control panel.
- Please make all terminals of this unit short-circuited. (It prevents the damage of inner circuit.)
